## Object-Oriented Language and Theory

## Hands-on lab guidelines

- 1. You have to follow the instructions in the hands-on lab and complete all exercises. If you can not finish them at class, please do it at home.
- 2. Commit and push all your results as soon as possible (when you finish, even at class) to bitbucket.org (through git) **BEFORE 9PM** of the day before our weekly class.
- 3. Git and Bitbucket tutorial:
  - a. Git tutorial:
    - i. Learn Git commands in <a href="https://git-scm.com/book/en/v2">https://git-scm.com/book/en/v2</a>
    - ii. https://git-scm.com/docs/gittutorial
    - iii. https://www.atlassian.com/git/tutorials
    - iv. <a href="https://www.youtube.com/watch?v=HVsySz-h9r4&list=PL-osiE80TeTuRUfjRe54Eea17-YfnOOAx">https://www.youtube.com/watch?v=HVsySz-h9r4&list=PL-osiE80TeTuRUfjRe54Eea17-YfnOOAx</a>
  - b. Bitbucket tutorial:
    - i. https://www.atlassian.com/git/tutorials/learn-git-with-bitbucket-cloud
    - ii. https://bitbucket.org/tutorials/bucket-o-sand
- 4. Guidelines to git/bitbucket.org to submit your assignment/mini-project:
  - a. Install Git (with optional tools: Source Tree, eGit for Eclipse...)
    - i. https://www.youtube.com/watch?v=HVsySz-h9r4
  - b. Create an account on https://bitbucket.org/
  - c. Create a **private** repository naming "OOLT.ICT.20221.StudentID.StudentName" (ICT) or "OOLT.VN.20221.StudentID.StudentName" (VN). If you don't follow this naming convention, your repository will be ignored.
  - d. Add dattt-student (<u>dattt.student@gmail.com</u>, <u>mducbg2000@gmail.com</u>, lethihoa.soict@gmail.com) as a member of your repository, also add your reviewer
  - e. Clone a repository, create a branch (the default and main one is master):

```
cd <local_working_folder>
git clone <repository_url>
cd <repository_name> /* e.g. OOLT.ICT.20212.StudentID.StudentName */
git branch /* let you know which branch you're working on */
git checkout -b <your_branch> /* create and switch to your new branch */
```

Then you can make any changes such as create a new file, modify an existing file, delete a file...

f. Commit and push after changing some resources:
cd <local\_working\_folder/repository\_name>
git add -A /\* -A: for all operations or . for without deletions in the current folder \*/
git status /\* check status of the stage \*/
git commit -m "Your comment for the update" /\* commit with comment\*/
git push origin <your\_branch> /\* push from local repo to remote repo \*/

After checking carefully the new branch code, the leader can go to the Bitbucket to *Create merge request*, then *Approve merge request* to merge the code to the master branch.

g. Pull without conflicts git stash /\* run this command if you want to ignore your current change \*/ git pull origin <your\_branch>

## h. Pull and resolve conflicts

After you commit and push to the remote repository, if there is any conflict when creating merge request, you need to resolve conflicts.

```
git checkout master
git pull origin master
git checkout <your_branch>
git rebase master
git add -A
git status
git rebase —continue
```

You need to resolve conflicts by checking the resources that have conflicts. There are both versions in the resources so that you can observe and make decisions, e.g.

## Having conflig:

```
<<<<< HEAD /* master branch in the remote repository */
suggestor.setClientId(clientID);
suggestion = suggestor.translate(input).replaceAll("-", " ");
====== /* your branch in the local repository */
suggestion = suggestor.translate(input);
>>>>> Your comment for the update
```

Merging (merge your local repository version with the replaceAll() method, remove the first statement of the remote repository):

```
suggestion = suggestor.translate(input).replaceAll("-", " ");
```

Then continue, force to push the merged version to the remote repository git push origin <your\_branch> -f
